

Bug Report

April 17, 2026

Part I

As a Requester

1. [Major] “Recent Requests” shows all requests in database (should be a duplicate of “My requests”)
 - (a) “View All Requests” doesn’t do anything (just refreshes page)
2. [Major] Requesters can approve, deny, or escalate requests if visible to user (as it stands, in “Recent Requests”)
3. [Major] Activity log is public to all users
4. Risk Distribution is public
 - (a) “View Activity Logs” button on main page is visible to requester
5. Analytics is public to all users
6. “Review Pending Queue” on homepage doesn’t link anywhere (just refreshes page)
7. “Total Requests,” “Auto-Approved,” etc. buttons on main page are for entire database, not per-user

Part II

As an Admin

1. “Request More Info” button (as an option b/w “Reject/Approve Request”) does nothing
2. Calendar does nothing on Activity Log

Part III

All users

1. Buttons are wrong color, making button practically invisible; ex. “Submit Request” is white on a white background until hover-over
2. In “Create Account,” existing users are not checked, allowing for someone to register the same email more than once (tested w/ user & admin); no changes are applied
3. Sign-in page has odd lines on “Supabase Email Sign-In” text
4. “AI Output” text box obstructs “One queue...” text box, creating a messy first page
5. Requester value inside Recent Requests bugs out for some users, displaying raw database values (ex. request #79)

Part IV

Missing Functionalities

1. Banner buttons (search, user, notifications) are still placeholder
2. “Auto-Review” in top-left doesn’t link to main page
3. “Requests Volume Over Time” doesn’t show anything
4. Login page is missing a redirect back to the Home page
