

Bug Report

as of 10:45 AM, 5/1/2026

Part I

As a Requester

1. [Major] “Submit Requests” doesn’t add to current requests (given 10 minutes; if dependent on AI, should **not** be)
2. “Search requests” button only works on main page
3. [?] AI summary is public; should most likely be hidden (to prevent gaming the system through exposing prompt)
 - (a) Cannot currently test, see (1)
4. “View All Requests” button is not visible for requesters (should link to /my-requests for requesters)

Part II

As an Admin

1. “Asset Upload” works but cannot handle large integers ($>2^{32}$)
 - (a) Rejects input altogether if value is greater than double ($>2^{64}$) [estimate]
2. Booking AI agent marking available rooms as “NOT AVAILABLE”
 - (a) Still happening despite time/date/room being different (ex. “Study Hall A NOT AVAILABLE”)
3. Escalate/Request More Info overwrite each other on status
 - (a) Multiple escalations/requests still possible
4. “Room Availability” does not get affected by requests, making it non-functional

5. No limit on Timeline Note length. See request #397

Part III

All users

1. In “Create Account,” existing users are not checked, allowing for someone to register the same email more than once (tested w/ user & admin); no changes are applied
2. “Supabase Email Sign In” text still has line through it from bottom panel overlapping on login page
3. “Login” and “Get started” go to the same page on banner; “Get started” should direct users to /register (bottom button is fine)

Part IV

Missing Functionalities

1. Banner buttons (user, notifications) are still placeholder
2. “Auto-Review” in top-left doesn’t link to main page
3. Login page is missing a redirect back to the Home page
4. CSV input’s purpose not clear. No change reflected anywhere.
